

## TRADE IS RETARDED

Effect of Weather Has Been to Make Business Dull.

## JANUARY FAILURES FEWER

Monthly Statistics Are Favorable in the Main-Building Activity Is Checked, but Lumber Market Reported Strong-Railway Extension Is Postponed-Commercial Failures.

New York, Feb. 8.—Bradstreet's will say to-morrow:

"First effects of the past week's widespread winter weather have been to dull trade at most markets, to quiet spring demand, retard collections, and in sections accentuate the already congested railway situation. Taken as a whole, the business looked by wholesalers for January and the elapsed portion of February is fully equal to, and, in some markets, and staples, notably cotton dry goods, far in excess of last year's large business."

"Building activity has been checked by weather conditions, but while some cities report dulled markets for materials, others report the lumber markets strong. Failures were few for January, clearings were next to the record, and prices of staples, as of February 1, were at the top. The winter wheat crop has been benefited by heavy snowfalls as far south as Tennessee."

## Money Market Is Better.

"Money is easier, commercial paper is more fully taken, and the security, grain, and cotton markets are all higher. Bank clearings are larger than last week, but are below those of a year ago. Bank clearings in January were next to the largest ever recorded, the high water mark having been touched in January, 1906."

"Pig iron is easier on business for future delivery, the indications in this respect being most marked at Eastern centers. Orders for steel rails are moderate, trolley lines figuring as the largest purchasers, while the placing of some large orders has been deferred owing to the money market conditions. Statistics of shoe shipments from Eastern centers bear out past reports of conservative buying of shoes from manufacturers for spring delivery."

## Monthly Statistics Favorable.

"Monthly statistics of failures, bank clearings, and prices are in the main very favorable. There were fewer failures in January than in any corresponding month for fifteen years past, but liabilities, swelled by some suspensions in the steel and wire business, were the largest for any January since 1897."

"Cotton future prices struck the low point of the year, February 1, when liquidation, not unexpected, apparently, with the easing of stocks, but this week the course of values has been steadily upward, with a net gain of about 14 cent on old crop, and of 15 points on new cotton."

## Dun's Weekly Review.

New York, Feb. 8.—Dun's Review will say:

"Severe storms restricted new business in many sections during the past week and increased the delay in making deliveries on old orders. Manufacturing plants operate at full capacity in the leading industries, although there are complaints of fuel scarcity. Real estate transactions and building permits promise much structural activity later in the season, sustaining prices of materials."

"The difficulty of placing securities has tended to retard railway extensions somewhat, and new contracts for steel rails are not coming to the mills as rapidly as in the closing months of last year."

"Aside from a few upward price movements, there is no change in the cotton goods situation. New England manufacturers of footwear report a liberal demand from Eastern wholesalers for supplementary spring lines."

## January Railway Earnings.

"More speculative interest has developed in the wheat market, encouraged by cables reports of heavy home needs for Russian wheat in relieving the famine and increased inquiries by exporters."

"Railway earnings thus far reported for last month exceeded those of January, 1906, by 84 per cent, while foreign commerce at this point alone for the last week showed a gain of \$9,885 in imports and a loss of \$8,032 in exports."

## Commercial Failures this Week in the United States are 213, against 265 last week, 296 the preceding week, and 229 the corresponding week last year.

## NEW BUREAU OF ENGRAVING.

## House Committee on Public Buildings Favors the Project.

The House Committee on Public Buildings and Grounds gave a hearing yesterday to Director Sullivan, of the Bureau of Engraving and Printing, and others in favor of a new building for the bureau, and after the conclusion of the hearing voted to recommend a bill for that purpose with an appropriation of \$2,000,000.

There were present besides Mr. Sullivan, William D. Leissler, president of the Plate Printers' Union; George P. Foster, R. I. Grace, J. C. Statts, J. P. Murphy, and George Thurber, comprising a committee of the Plate Printers' Union. Mr. Leissler said that increase of work had made it necessary to use the force in night and day shifts, and there were now 500 employees thus at work nights. Many of them were young women, and it had been necessary to use details of policemen to protect them as they left the building about midnight. The various floors were so badly crowded that ventilation was simply impossible. Presses were so close on some floors that there was danger in passing among them. Not only the number of persons crowded in the rooms, but the odor of ink and from gas-blower flames joined to make the air unbearably.

Mr. Sullivan read Secretary Shaw's letter to the Speaker, in which he pronounced the present building a sweatshop of the worst sort. He begged the committee to come and see the building for themselves. The provision of a new building would not cause any undue expenditure, he urged, because the present building, which was fireproof, could be used for the storage of records. Action at this session so plans might be made and a site secured was imperative. He said he had a site in mind, but did not want to mention it, as prices would be raised if there should be notice in advance as to the location.
